

KILN DRIED LOGS

KILN DRIED LOGS

Kiln dried logs provide you with the ultimate burn quality with maximum heat output. The kiln drying process in our wood fired kilns remove most of the water for you, down to below an average of 20% moisture content. Burning kiln dried logs will ensure stove glass is kept clean and will prevent a build-up of soot or tar in a chimney or flue and because you get so much heat output, you will actually need less kiln dried logs than if you were to buy seasoned logs, thus providing you with great value for money.

Kiln dried logs also provide you with a consistent product that you can rely on every time, unlike 'seasoned logs' which can be inconsistent in terms of their moisture content due to the natural and varied drying process.

SPECIFICATION

Log Size	25cm (standard) +/-10% tolerance
Origin	British
Log Diameter	5-15cm across the widest point (+/-10% tolerance)
Moisture Content	Below 20%

KILN DRIED FLAMING FIREWOOD VALUE PACK

This pack is made from all the out-grades of the main kiln dried logs packs. It includes all of the smaller and shorter pieces that don't make the premium grade. These still provide you with the ultimate burn quality with maximum heat output, however as the pieces are smaller, burn time will be faster.

SPECIFICATION

Log Size	Mixed Variable Sizes
Origin	British
Log Diameter	Mixed Variable Sizes
Moisture Content	Below 20%
