

Soil Improver

A high specification, peat-free soil improver, produced from natural ingredients, in accordance with BSI PAS100:2018

Made from composted organic matter, it is highly fertile and improves the structure of clay, sandy or chalky soils by increasing the organic matter content. Improving the soil's structure will enhance its drainage characteristics and air and water holding capabilities, all of which will result in healthier plant growth.

For consistent, successful growing results

- Improves soil fertility
- Helps break up clay soils, improving drainage and workability
- Improves moisture and nutrient retention in sandy and chalky soils

Friable and light

- Easy to barrow, spread and work into the soil
- Minimal stone content

Safe and environmentally friendly

- Peat free
- Produced from appropriately sourced, recycled ingredients in accordance with BSI PAS100:2018

Versatile

- Can be used as a multi-purpose compost for containers and potting on, but not suitable for seed germination
- Can also be applied as a mulch
- Apply anytime, taking care to avoid digging/forking wet soil, as it may damage the soil structure

Rolawn is certified to BS EN ISO 9001:2015 and BS EN ISO 14001:2015 demonstrating that our processes and systems meet standards that enable us to deliver high-quality products and services to meet customer needs in a responsible manner.

Size and coverage

Bag Size: approx. 1 m³ (1000 litres) when packed

Coverage: Up to 20m² at a depth of 50mm

Weight to volume ratio (bulk density) is typically around 550kg per 1 m³ bag

Typical application rates for improving topsoils with low levels of organic matter:

- Heavy clay soil - a layer, 75mm deep, should be incorporated to a depth of 200mm
- Chalky soil - a layer, 50mm deep, should be incorporated to a depth of 200mm
- Light sandy soil - a layer, 30mm deep, should be incorporated to a depth of 200mm

Each bag covers:

- up to 14m² at a depth of 75mm
- up to 20m² at a depth of 50mm
- up to 33m² at a depth of 30mm
