

GroRight® Lawn Establishment Fertiliser

A good root structure is important for a healthy lawn and for this, a good supply of the correct nutrients is needed.

This can be achieved by suitable preparation of the ground prior to laying turf or sowing lawn seed; ideally with an application of Rolawn's GroRight® Lawn Establishment Fertiliser.

Promotes strong and rapid root growth

- Feeds turf and grass seed from the roots up to ensure your new lawn gets off to the best possible start
- Special 'mini granules' promote even distribution of nutrients within the soil, ensuring strong root establishment
- These mini granules control the release of fertiliser with precision, without affecting soil pH levels

- Over 70% of the nitrogen is slow release
- NPK Fertiliser 7:10:10 containing Magnesium and Sulphur with Manganese for early establishment of new lawns

Improves drought and disease tolerance

- Contains Phosphate and Potassium to improve drought and disease resistance as well as promoting rapid root growth
- Provides protection from root rot

Formulated using a slow release technology, which is key for promoting all round plant strength, it is suitable for all soil types and for any turf or seed. The technical specification also makes it suitable for use as a top feed, to replenish the nutrients in an established lawn.

Size and coverage

Bag Size: 5kg

Coverage: approximately 125m²

Suitable for use as a topfeed

- Smaller than average granules protect turf from "hot" spots

Use all year round in any soil type

- Feeds for up to 4 months

London's finest turf and topsoil
